

University Management System

A comprehensive system proposal for managing academic and administrative operations within a university.

1. System Overview

The system aims to digitize and streamline university operations, including student management, academic scheduling, grading, and reporting.

2. User Roles

- Admin: Full system control and user management.
- Staff: Manage student data and departments.
- Lecturer: Handle courses, grades, and attendance.
- Student: Access courses, schedules, and results.

3. Student Management

- Register and manage student records
- Upload documents
- Track academic status
- Search and archive students

4. Course Management

- Create and manage courses
- Assign lecturers
- Define credits and departments

5. Scheduling System

- Create lecture schedules
- Assign classrooms
- Display schedules to users

6. Grading System

- Input grades

- Calculate GPA
- Export reports (PDF/Excel)

7. Reports & Dashboard

- Student reports
- Performance analytics
- Interactive dashboard

8. Security

- Role-based permissions
- Secure authentication
- Audit logs

9. Technical Features

- Web-based system
- Mobile responsive
- API support
- Real-time updates

System Modules Overview

Module	Description
Students	Manage student data
Courses	Handle course structure
Grades	Academic performance
Finance	Fees and payments
Reports	Analytics and exports
